Chief Instructor, CE

Final Course Report - Counterespionage Operations #2 30 April - 18 May 1956

- 1. Counterespionage Operations No. 2 ended on 18 May 1956. It was attended by the regular complement of 15 students. Represented were students from FE, WE, WH, NEA, SR, EE, OTR, and the CI Staff. Grades ranged from GS-9 to GS-15. This was a polyglot group representing five different designations: 8 with FI, 4 PP, 2 OTR, and one with TSS. While such a group made the fixing of an instructional level difficult, general student reaction was quite favorable. At least two students asked that the course be lengthened to four weeks. Eleven students indicated the course level to be right, two believed it too high, two others did not comment.
- 2. This course was an improvement over the previous running in various aspects:
 - a. Requirements levied on the students through selected reading material and problems were more exacting and definitive.
 - b. An entire new series of tests was compiled.

 c. All seminar sessions were better. This includes the

 Satellite Services Seminar. This phase of the Foreign Service bloc

 may nevertheless be changed. The

 most favorably, and it may be that

 will be as profitable as the Satellite Services Seminar and more

 favorably received.

At the same time the staff is preparing a chart giving the names of each Satellite intelligence service, its charter, targets as we know them, and other established date. This will be a ready reference handout for the students.

- 3. The remaining problem is the lecture. Er. Harry will discuss this matter anew with FE and propose that the lecture be cut to one hour and be devoted to FE efforts against the A one-hour lecture along with the NIS study will have to serve as our coverage of this service for the present.
- 4. The testing and evaluation phase of the course looms larger and more time consuming. With the assistance of ***XffA9a testing program was again materially altered. Two new tests, along

with the reading and problem requirements, make our evaluative process more and more discriminating and scientific.

5. While the course content was better, the students were poorer; but the everall reaction will reflect quite favorably on OTR.
